**Product Description**

M2Tech® gypsum boards are moisture and mold resistant and are designed for use on interior walls and ceilings; specially engineered to provide enhanced moisture and mold resistance. They have a specially formulated moisture resistant core and are enclosed in a 100% recycled moisture and mold resistant light violet colored face paper and bronze colored back paper. M2Tech Gypsum Boards may be finished, painted textured or wallpapered using regular gypsum board techniques.

**Basic Uses**

M2Tech Gypsum Board is used for interior walls and ceilings in standard residential, commercial or institutional applications. It can be used for new construction or renovations over wood or steel framing. It is typically nailed or screwed to studs spaced 16" (400 mm) or 24" (610 mm) o.c., but can be applied by laminating or with the use of an adhesive. M2Tech Type X Gypsum Board is used for the above mentioned applications requiring fire ratings.

**Advantages**

- Fire resistance ratings up to four hours (M2Tech Type X)
- M2Tech technology provides additional zone of protection against moisture and mold
- Achieves best possible score of 10 for mold resistance per ASTM D3273*
- Achieves best possible score of 0 for mold resistance per ASTM G21*
- GREENGUARD® Gold Certified
- Less than 5% water absorption by weight after 2-hour immersion, as per ASTM C473 test method
- Uniformly flat, attractive appearance; no shadows
- High edge hardness
- No wavy edges, warps, bows or deformities
- Uniform high-strength cores eliminate crumbling, cracking
- Edge tapers consistent to form perfect joints
- Excellent thermal barrier and sound attenuation qualities
- Exposure to continuous moisture or extreme temperatures should be avoided.
- Not recommended for continuous exposure to temperatures exceeding 125°F (52°C).
- Ceiling framing spacing should not exceed 16" (400 mm) o.c. for 1/2" M2Tech with water-based texture finish; 24" o.c. (610 mm) for 1/2" M2Tech Regular without water-based texture finish; 24" o.c. (610 mm) for 5/8" M2Tech Type X. Applied perpendicular to framing.
- Wall framing spacing should not exceed 24" (610 mm) o.c.
- Store indoors and off ground surface.
- Boards should be stacked flat with care taken to prevent sagging or damage to edges, ends and surfaces.
- Storing board lengthwise leaning against the framing is not recommended.
- Boards should be carried, not dragged, to place of installation to prevent damaging finished edges.
- Cutting and scoring should be done from the face side.
- In cold weather or during joint finishing temperatures within the enclosure should stay within the range of 50° to 95°F (10° to 35°C) and with sufficient ventilation to carry off excess moisture.

---

**Limitations**

- Avoid exposure to water or excessive moisture during transportation, storage, handling, during or after installation. Good design and construction practices that prevent water and moisture exposure of building products are the most effective strategy to avoid the growth of mold.
- Not recommended for exterior application (Exterior Soffits and Ceilings are permitted for M2Tech products from specific mfg. plants - see CertainTeed sales representative).
- CertainTeed Moisture and Mold Resistant gypsum board is not recommended for areas which will be continuously wet or subjected to high humidity such as saunas, steam rooms or gang showers.

Product data

**Thickness:**
- 1/2" (12.7 mm) Regular
- 5/8" (15.9 mm) Type X

**Width:**
- 4' (1220 mm) standard

**Length:**
- 8', 10', 12' standard (2440 mm, 3050 mm, 3660 mm)

**Weights (nominal):**
- 1/2" Regular - 1.6 psf (7.8 kg/m²)
- 5/8" Type X - 2.2 psf (10.7 kg/m²)

Custom lengths available upon request. Contact the nearest Sales Office for stocked lengths available.

**Edge:** Tapered

Technical Data

**Composition and Materials**
Manufactured panel with gypsum core, encased in paper. Various additives are added to the core to enhance moisture and fire resistive qualities.

**Surface Burning Characteristics**
CertainTeed Moisture and Mold Resistant gypsum board has a Flame Spread ratings of 5 and Smoke Developed ratings of 5 when tested in accordance with ASTM E84, (UL 723, NFPA 255, CAN/ULC-S102).

**Fire Resistance**
Fire resistance tests are conducted in accordance with ASTM E119, (ANSI/UL263, NFPA 251, CAN/ULC-S101) and no warranty is made other than conformance to the standard under the assembly. Minor discrepancies may exist in the values of ratings, attributable to changes in materials and standards, as well as differences between the testing facilities. Assemblies are listed as "combustible" (wood framing) and "noncombustible" (concrete and/or steel construction). For fire resistance ratings, refer to the Gypsum Association Fire Resistance Design Manual and UL Fire Resistance Directory - Vol. 1 or ULC Fire Resistance List of Equipment and Materials.

M2Tech Type X products are included in UL / cUL / ULC Type Designations listed in Fire Resistance Directories - Type X and Type X-1.

**Applicable Standards and References**
- Meets ASTM C1396 and CAN/CSA-A82.27
- ASTM C840
- CAN/CSA-A82.31 Gypsum Board Application
- Gypsum Association GA-216
- Gypsum Association GA-214
- ICC International Building Code (IBC)
- ICC International Residential Code (IRC)
- National Building Code of Canada (NBCC)

**Installation Recommendations**
Installation of M2Tech Gypsum Board should be consistant with methods described in the standards and references noted. Cutting should be from the face side of the boards for best results.

**Decoration**
M2Tech Gypsum Board accepts most types of paints, texture and wall covering materials. The surface shall be primed and sealed with a full-bodied latex primer before applying a final decorative material. This will equalize the suction between the joint compounds and the paper surface.

For best painting results, all surfaces, including joint compound, should be clean, dust-free and not glossy. If glossy paints are used, a thin skim coat of compound over the entire surface, Level 5 finish, is recommended to reduce highlighting or joint photographing. This method is also recommended for areas of critical sidelighting of natural or artificial light sources.

A sealer application under wallpaper or other wall covering is also recommended so the board surface will not be damaged, if the covering is subsequently removed during redecorating. Joint treatment must be thoroughly dry before proceeding with primer-sealer application and final decoration.

* The performance of CertainTeed Moisture and Mold Resistant gypsum board in actual use may not accurately reproduce the results achieved in this ASTM laboratory test. Good design and construction practices that prevent water and moisture exposure of building products are the most effective strategy to avoid the growth of mold.
